

Press Release

petWALK solutions – experience the world's first fully connected pet door

Austria, 12.01.2018

“Alexa, ask petWALK to open the door!” This and similar voice orders will be heard quite often in the near future.

petWALK is the first premium pet door which can be controlled not only via remote, mobile device, any web browser or smart home system, but also via personal voice assistants like Amazon´s Echo™ or Google Home™.

Make yourself comfortable, as you do not have to get up every time your pet wants to go out. Lay back and enjoy your freedom!

All you need to own is a smart petWALK pet door and of course a personal voice assistant. Those who already have a petWALK door in use will appreciate the modularity of petWALK: upgrading is easily possible as all new product developments can be added on to any petWALK door in use!

Speaking of product developments, petWALK showcases several new additions to the product portfolio during CES 2018.

If you want to learn more, come by our booth no 40050 in Sands Hall A-D, or contact us directly via email.

About petWALK

Petwalk Solutions GmbH & Co KG is an Austrian manufacturer of the world's first front doors for pets. Founded in 2010 by Klaus Kindl, petWALK was designed to comply with the strict regulations for passive houses. The patented and award-winning petWALK door is completely airtight, insulated and burglar-proof pet entry solution. petWALK can be installed almost anywhere and is adaptable in design and function. It recognises pets via movement detection or RFID tags and opens automatically. Doing so, it allows pets and pet owners to gain more freedom. In 2018, petWALK introduces its newest product innovations and prepares for its market entry in North America. As of now, petWALK is already supplying freedom to pets and pet owners in more than 30 countries around the globe – from Austria to Australia.
